

WHY USE BLUE GRASS ENTERPRISES

Beautiful Lawns Begin at Blue Grass

You have a choice where to purchase your sod. When you purchase turf from Blue Grass Enterprises, be assured you are receiving the finest quality sod available.

Consider how much you do on your lawn: grill outs, gatherings, picnics, bonfires, laying out to read a book, a place for children or pets to play... Investing in a soft, dark green, low maintenance, carpet-like grass feels good (literally) for years to come.

In fact, your lawn is one of the “longest impact” decisions you will ever make. For example, you will not change your lawn every three or even every 20 years, like a new paint color in your kitchen, or new carpet in your living room. A lawn is a forever decision.

You make many decisions when you build or remodel your home; choosing which sod to install is a surprisingly important decision.

Three Considerations

- Each crop is grown from certified seed, not re-growth; You can be assured that what you want is what you get.
- Our farm management system develops optimum growing conditions to deliver you superior quality sod every time.
- We use state-of-the-art prescription applications of seed, fertilizer and chemicals to be as “Green” as possible.

WHY BLUE GRASS ENTERPRISES

Simply the Best

A high quality lawn not only gives you a beautiful space to play and live, but it also raises your property value.

We are confident our Master Blend Sod will save you time and money while giving you the best looking lawn money can buy.

People don't always think about grasses having different behaviors, so think about maple tree species for a moment. Think about the varieties of colors, textures, heights and growth rates you have seen.

The same differences exist within the species of Kentucky bluegrass. There are 350 cultivars that all grow at different heights, have different textures, have different colors, and require different inputs for you as a homeowner to look their best.

We have spent decades using National Turfgrass Evaluation Program trial results from 26 land grant universities plus farm testing to research, analyze and identify the best varieties and techniques to growing high quality sod so that you wind up with the darkest, densest, most lush lawn on the block with minimal effort.

Because of the high quality of the seed we select to grow, our sod requires less mowing, fewer feedings, fewer chemical applications because of the quality of seed varieties, saving you time and money over the years.

Sod is an investment in your future. You can either choose years of enjoyment or work. Isn't considering what options are available worth it?

What we offer

Master Blend Sod

Master Blend is a blend of Kentucky bluegrass varieties selected from the best of the best. It is dark green, lush, and low-growing to save you time and money while providing years of enjoyment.

Universities around the country test hundreds of varieties each year for characteristics like disease and insect resistance, drought, wear and shade tolerance, mowing and color qualities. From these results we select varieties that will provide you a naturally dark green, thick and luxurious trouble-free lawn.

FEATURES & BENEFITS

- *Great for everyday home or business lawn use*
- *Naturally dark green in color*
- *Resistant to disease and grubs*
- *Dwarf varieties grow low and thick requiring less mowing and gives your lawn a carpet-like look and feel*
